             Antibody material associated with ulcerative colitis - comprising anti-neutrophil cytoplasmic antibody, characterised by perinuclear neutrophil staining pattern

5 Action anti-neutrophil staining pattern

6 A CDNA clone (144091) derived from human gut-associated lymphoid tissue codes for the light chain (WO7615) of recombinant UCPANCA Fab clone 5-4. Anti-neutrophil cytoplasmic antibody characterised by perinuclear neutrophil staining pattern (pANCA) associated with characterised using a phage display technique. Libraries of VH-characterised using a phage display the immunoreactivity of Characterised using a phage display the immunoreactivity of methods for screening for UCPANCA and for isolating UCPANCA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       64 tgcaqqqccaqtcaqqqqtqttaqcaqcqqctccttaqcctqqtatcaqcaqaaaqctqqc 123

Prod No. is the number of results predicted by chance to have a score greater than or equal to the source of the result being printed.

Mean 9 977% Variance 4 524, scale 2,197

. 31 | 64 | 56

and is derived by analysis of the total score distribution.
